## BUSBAR SYSTEM

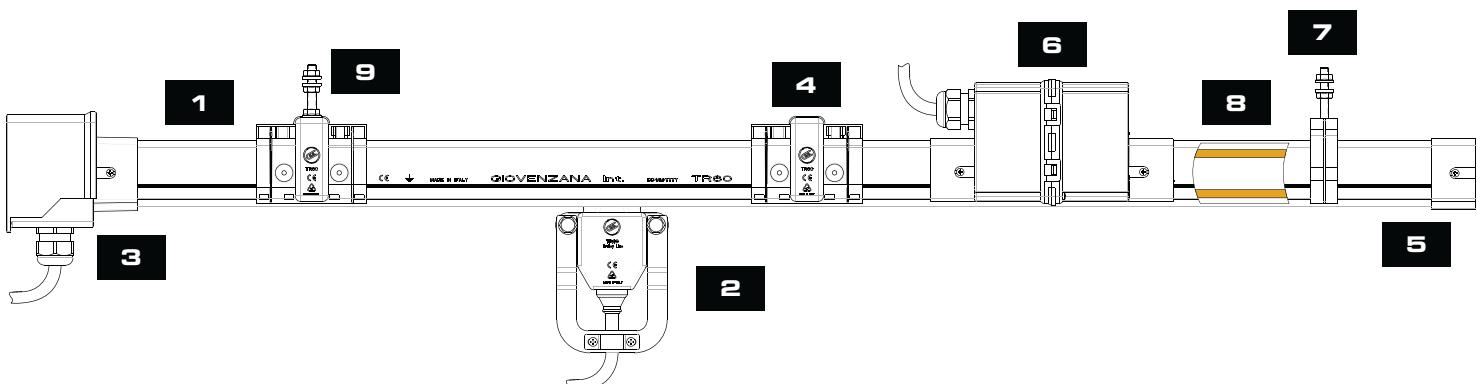

### BUSBAR SYSTEM

The "trolley system" series conductors rails is modern and safe system for energy transmission for various types of equipment, such as, cranes, bridge cranes, conveyour belts, chain conveyors, etc...

The "trolley system" complies with the relevant international standards ensuring safety of the operator, easy installation and reliability.

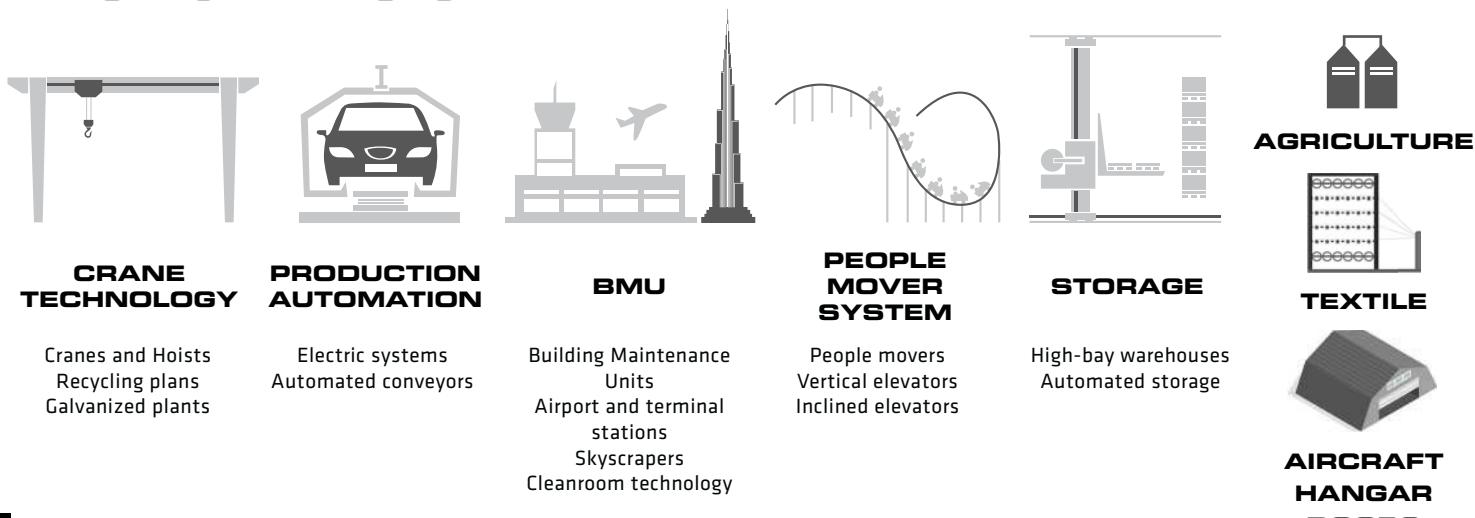

The new "H" honeycomb profile of the TR85H line guarantees extra endurance and lightness.

### TYPICAL LAYOUT

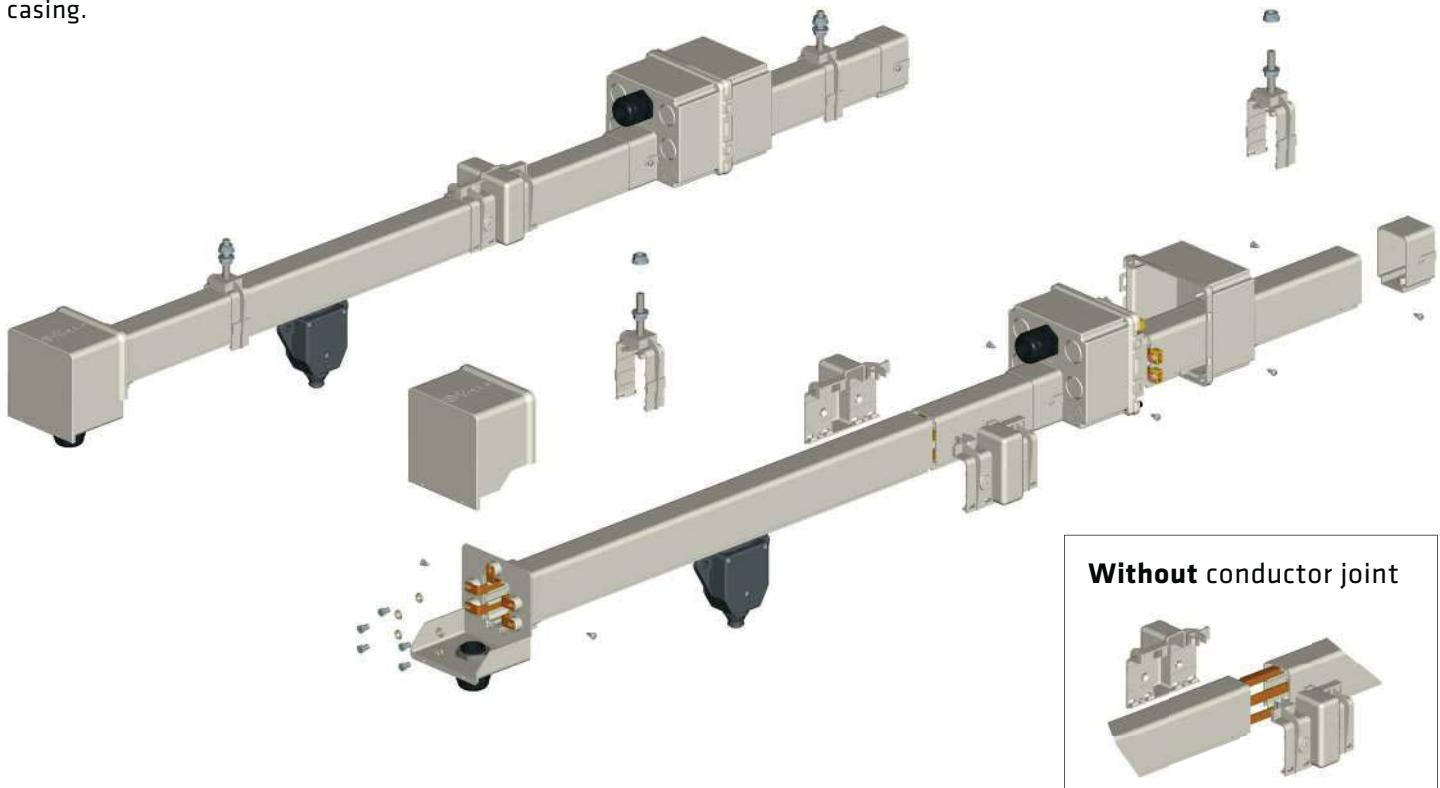

<b>1</b>	<b>BUSBAR</b>	PVC Housing
<b>2</b>	<b>TROLLEY CURRENT COLLECTOR</b>	Transmits the energy from the conductor to the machine
<b>3</b>	<b>HEAD FEED BOX</b>	Connects power supply to the conductors
<b>4</b>	<b>JOINT BOX</b>	Links two busbars
<b>5</b>	<b>END CAP</b>	Closes and protects the busbar end
<b>6</b>	<b>IN-LINE FEED BOX</b>	Connects power supply from centre to avoid the voltage drop
<b>7</b>	<b>HANGER CLAMP</b>	Connects the busbar to the brackets
<b>8</b>	<b>COPPER STRIP</b>	Transmits the energy from the power supply to the current collector
<b>9</b>	<b>FIXED POINT</b>	Creates a fixed point

### TYPICAL UTILIZATIONS

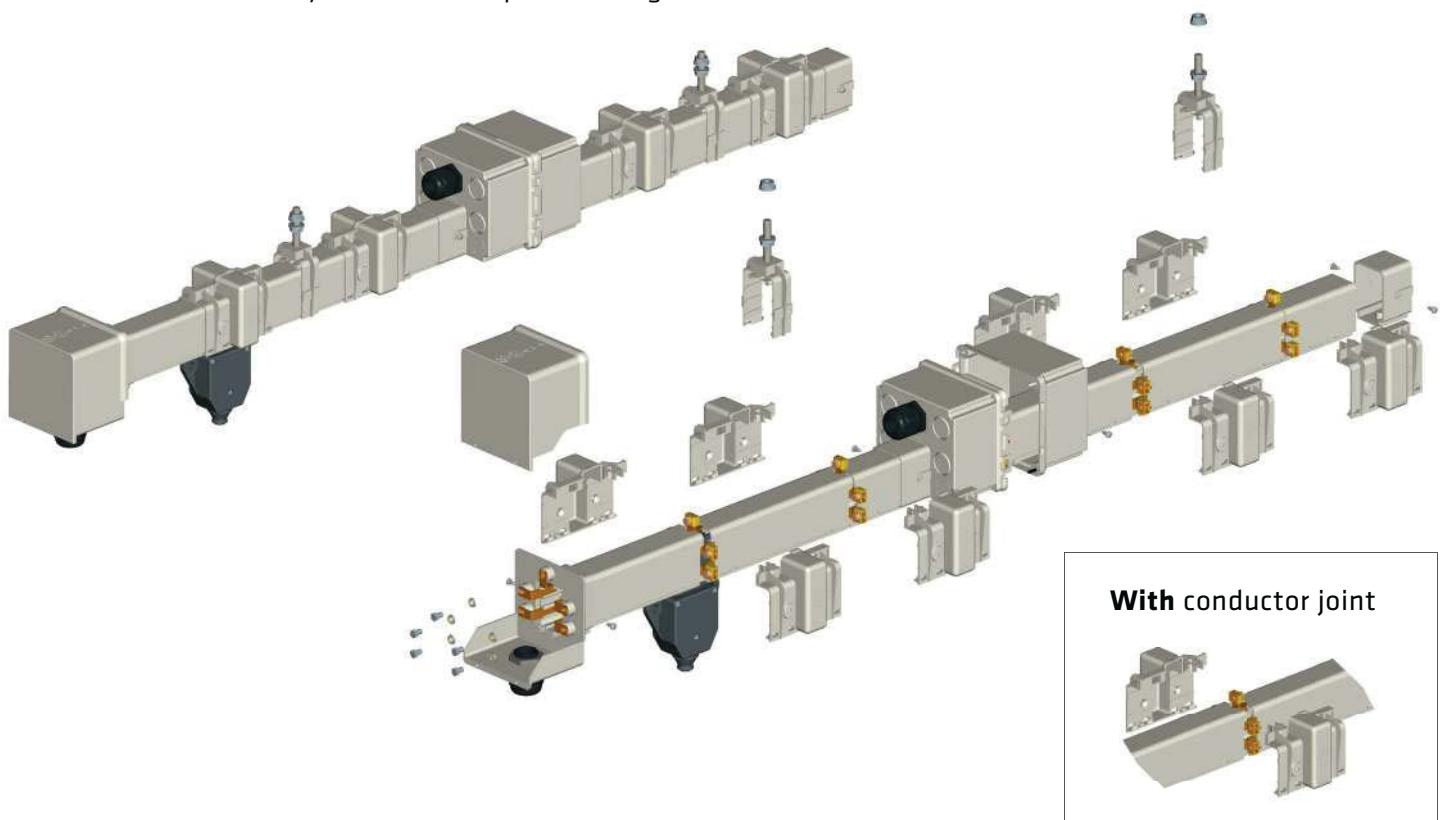

**AVAILABLE VERSIONS**
**A. CONTINUOUS CONDUCTORS**

The conductors are pulled from a coil without joints into the already installed casing.

**B. PRE-MOUNTED CONDUCTORS**

The conductors are already inserted in the plastic casing.

### LINE CONSTRUCTION

To decide the size of trolleys it is necessary to consider:

- ⇒ Maximum current in service
- ⇒ Devices (cage motors, slip rings motors, resistors, electronic starters)
- ⇒ Starting current of the devices
- ⇒ Maximum ambient temperature
- ⇒ The distance between device to the nearest power feed
- ⇒ Voltage and admissible voltage drop in continuous and in starting service
- ⇒ Type of current
- ⇒ Devices cycle operations (load factor)

### CALCULATION OF THE VOLTAGE DROP

► Voltage drop should not exceed 5% of rated voltage in normal operating service.

Three phase alternate current:

$$\Delta u = \sqrt{3} \times I \times L_t \times Z$$

$$\Delta u \% = \frac{\Delta u \times 100}{U}$$

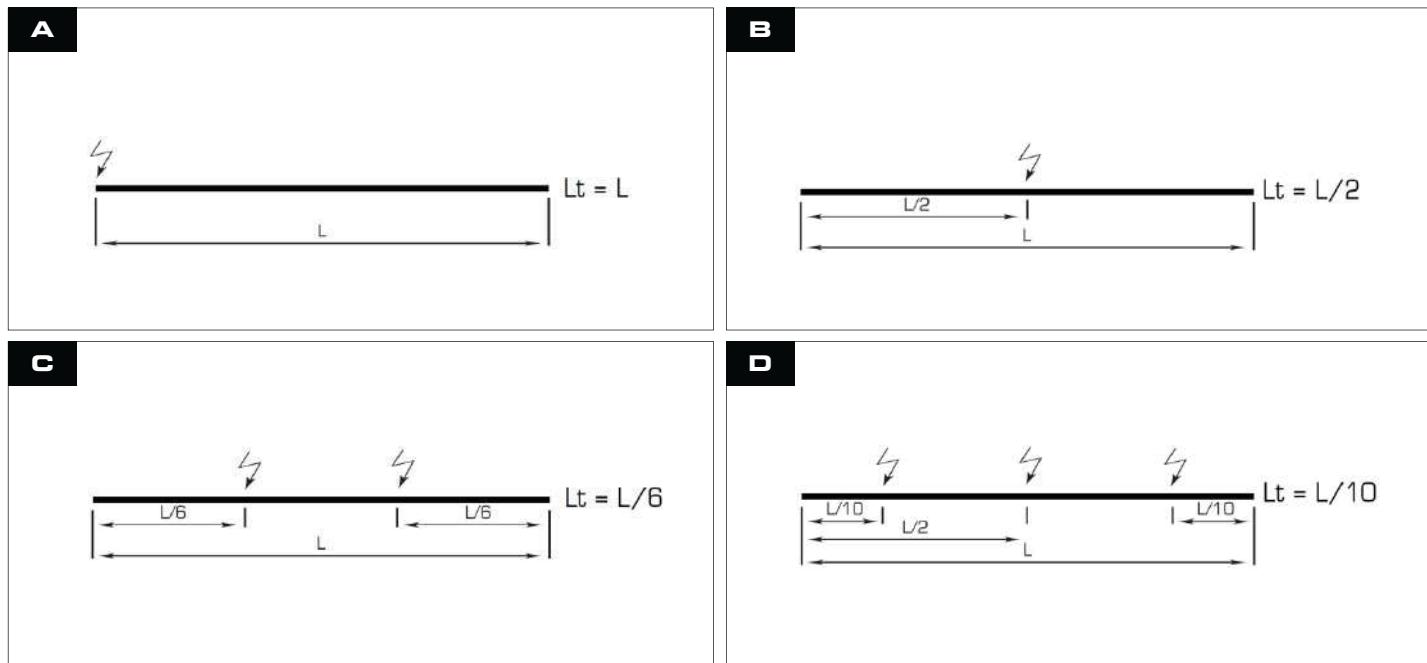

Keys:

$\Delta u$  = Voltage drop [V]  
 $\Delta u \%$  = Voltage drop [%]  
I = Current intensity [A]  
L<sub>t</sub> = Length of section [m]  
Z = Impedance [ $\Omega/m$ ]  
U = Voltage [V]

### POWER FEED: BUSBAR TRACK LENGTH

► A proper disposal of power feed points minimize the voltage reduction.  
If "L" is the lenght of the line, "L<sub>t</sub>" is the track maximum length to consider the voltage reduction.

- A** L<sub>t</sub> = L - with ending/starting power feed
- B** L<sub>t</sub> = L/2 - with in-line power feed
- C** L<sub>t</sub> = L/6 - with power feed at 1/6 from each end
- D** L<sub>t</sub> = L/10 - with three power feed at L/2 and L/10 from each end

# TECHNICAL DATA

## CURRENT IN CONTINUOUS SERVICE

Specify the number of the devices which work simultaneously to calculate the corresponding current:

$$I_n = I_1 + I_2 + I_3 + \dots$$

The current can be determined from the devices power [W] that for a three phase system is:

$$I_n = \frac{P_u}{\sqrt{3} \times U \times \cos \varphi \times \eta}$$

Keys:

$I_n$  = Current consumption [A]  
 $P_u$  = Power devices [W]  
 $\eta$  = Devices performance  
 $U$  = Operating Voltage [V]  
 $\cos \varphi$  = Power factor

In the absence of information on the operation of simultaneous devices, consider the following table:

N° OF IN-LINE LIFTING DEVICE	LIFTING EQUIPMENT IN USE			
	1 <sup>ST</sup> ENGINE	2 <sup>ND</sup> ENGINE	3 <sup>RD</sup> ENGINE	4 <sup>TH</sup> ENGINE
1	x	x		
2	x	x	x	
3	x	x	x	
4	x	x	x	x
5	x	x	x	x
N° 2 lifting equipment operating simultaneously	x	x	x	x

\* About  $\eta$  motors connected in parallel with rated current  $I_n'$ , consider  $I_n = \eta \times I_n'$ .

## STARTING CURRENT

Calculate the numbers of the devices started simultaneously and the device already in service, then calculate the corresponding current. If the starting current is unknown, proceed with the following approximation:

For a single user

$$I_a = K \times I_n \quad K = \frac{\text{Starting current (}I_a\text{)}}{\text{Nominal current (}I_n\text{)}}$$

As a general rule, consider:

$K = 5$  to  $6$  for cage motors  
 $K = 2$  for winding motors  
 $K = 2$  for inverters (frequency converters)

In the absence of information on the operation of simultaneous devices, consider the following table:

N° OF IN-LINE LIFTING DEVICE	LIFTING EQUIPMENT IN USE			
	1 <sup>ST</sup> ENGINE	2 <sup>ND</sup> ENGINE	3 <sup>RD</sup> ENGINE	4 <sup>TH</sup> ENGINE
1	Ia	Ia	Ia	Ia
2	x	x	x	x
3	x	x		
4	x	x	x	x
5	x	x	x	x
N° 2 lifting equipment operating simultaneously	x	x	x	x

## MULTIPOLE SYSTEM

### MULTIPOLE SYSTEM

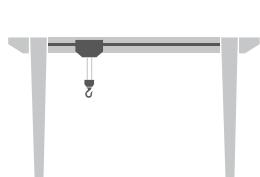

The Multipole System is one of the most used insulated system for transmission of power. The main applications of this system are for mobile power consumer: automatic warehouse, light cranes and packaging machinery. The honeycomb profile guarantees high rigidity and the design of the trolley allow to feed device that have high travel speed (up to 500 m/min).

### TYPICAL LAYOUT

<b>1</b>	<b>BUSBAR</b>	PVC Housing
<b>2</b>	<b>TROLLEY CURRENT COLLECTOR</b>	Transmits the energy from the conductor to the machinery
<b>3</b>	<b>HEAD FEED BOX</b>	Connects power supply to the conductors
<b>4</b>	<b>JOINT BOX</b>	Links two busbars
<b>5</b>	<b>END CAP</b>	Closes and protects the busbar end
<b>6</b>	<b>IN-LINE FEED BOX</b>	Connects power supply from centre to the conductors
<b>7</b>	<b>HANGER CLAMP</b>	Connects the busbar to the support (posts, columns)
<b>8</b>	<b>COPPER STRIP</b>	Transmits the energy from the power supply to the current collector
<b>9</b>	<b>FIXED POINT</b>	Creates a fixed point to control thermal expansion

### TYPICAL UTILIZATIONS

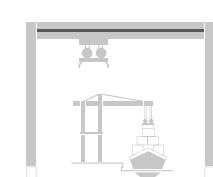

#### CRANE TECHNOLOGY

Cranes and Hoists  
Recycling plans  
Galvanized plants

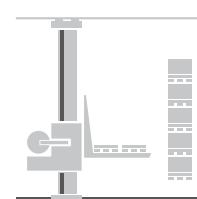

#### PRODUCTION AUTOMATION

Electric systems  
Automated conveyors

#### PORT TECHNOLOGY

RTG cranes  
STG cranes

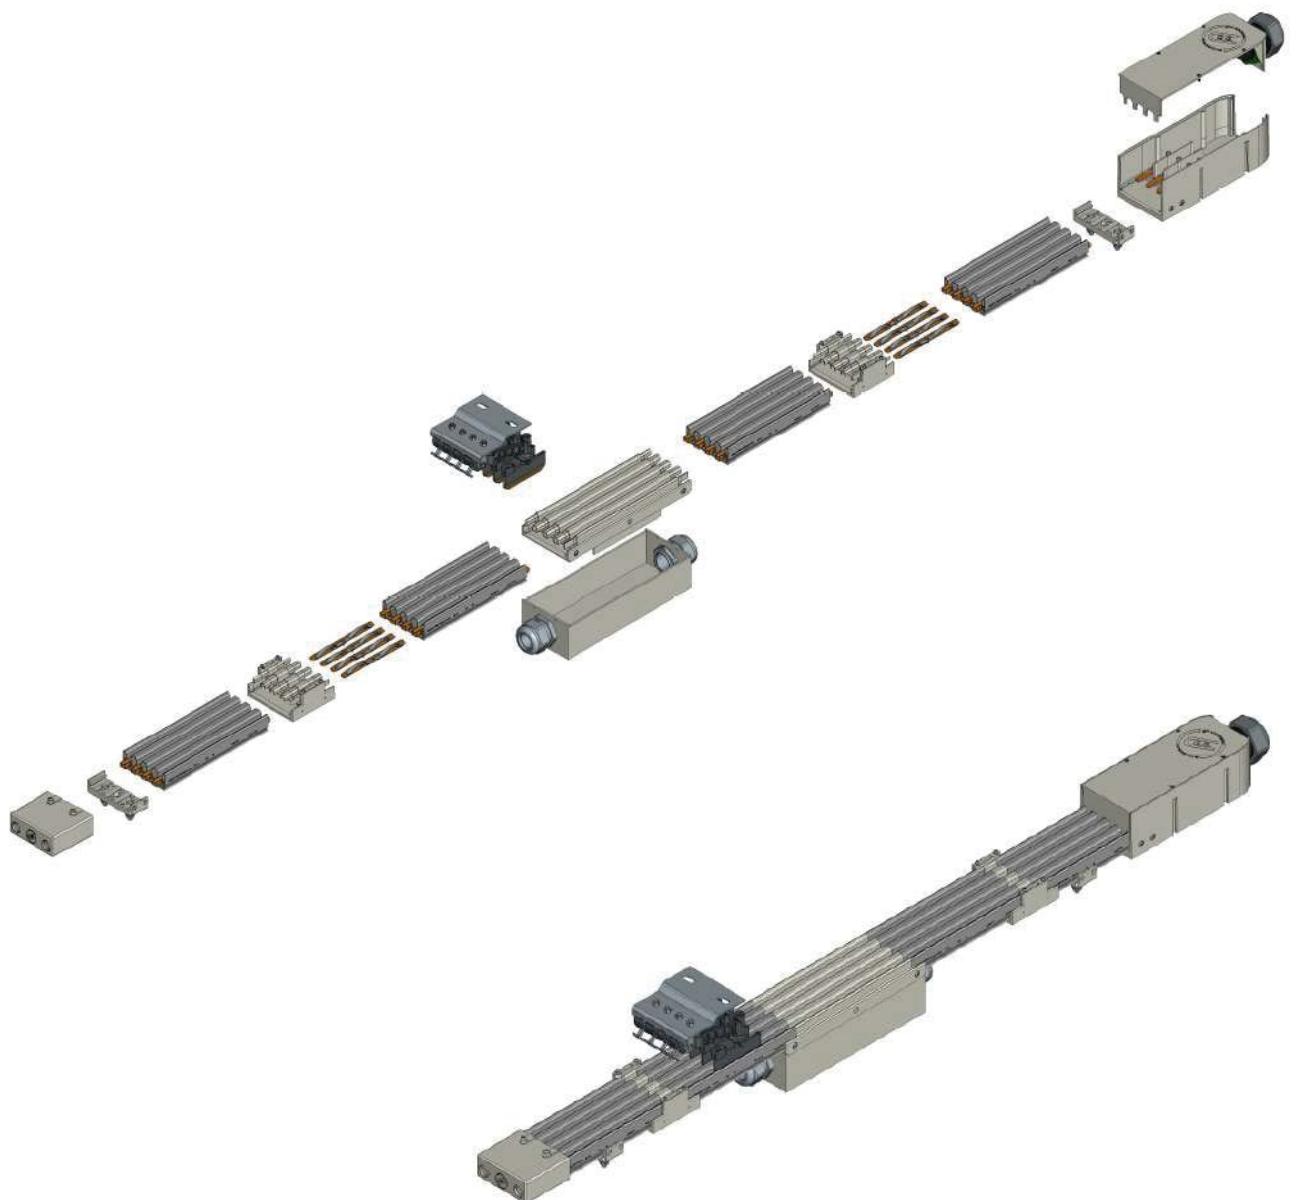

#### STORAGE

High-bay warehouses  
Automated storage

## FESTOON SYSTEM

### FESTOON SYSTEM

The Festoon System is the traditional system for energy transmission by using cable. The main applications of this system is for mobile power consumer like crane, monorail, electric hoist, machine tools, car wash systems, plating lines, etc...

This feeding system has several advantages:

- Safety - the cable are flame resistant, the conductor are completely protected;
- Versatility - it can be used for straight rail as curves rail, for indoor and outdoor applications;
- Easy to install;
- The maintenance of the line is extremely reduced.

### AVAILABLE VERSIONS

#### A. LINE 30

- **LOAD CAPACITY: 100 kg/m**
- **Bar size: 30 x 32 mm**
- **Bar lenght: 4 mt**

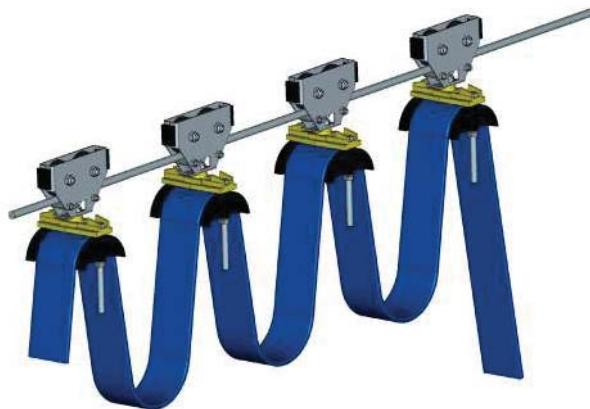

#### B. LINE 41

- **LOAD CAPACITY: 140 kg/m**
- **Bar size: 39 x 56 mm**
- **Bar lenght: 4 mt**

#### C. LINE 41 STAINLESS STEEL

- **LOAD CAPACITY: 140 kg/m**
- **Bar size: 39 x 56 mm**
- **Bar lenght: 3 mt**

#### D. LINE WIRE-ROPE

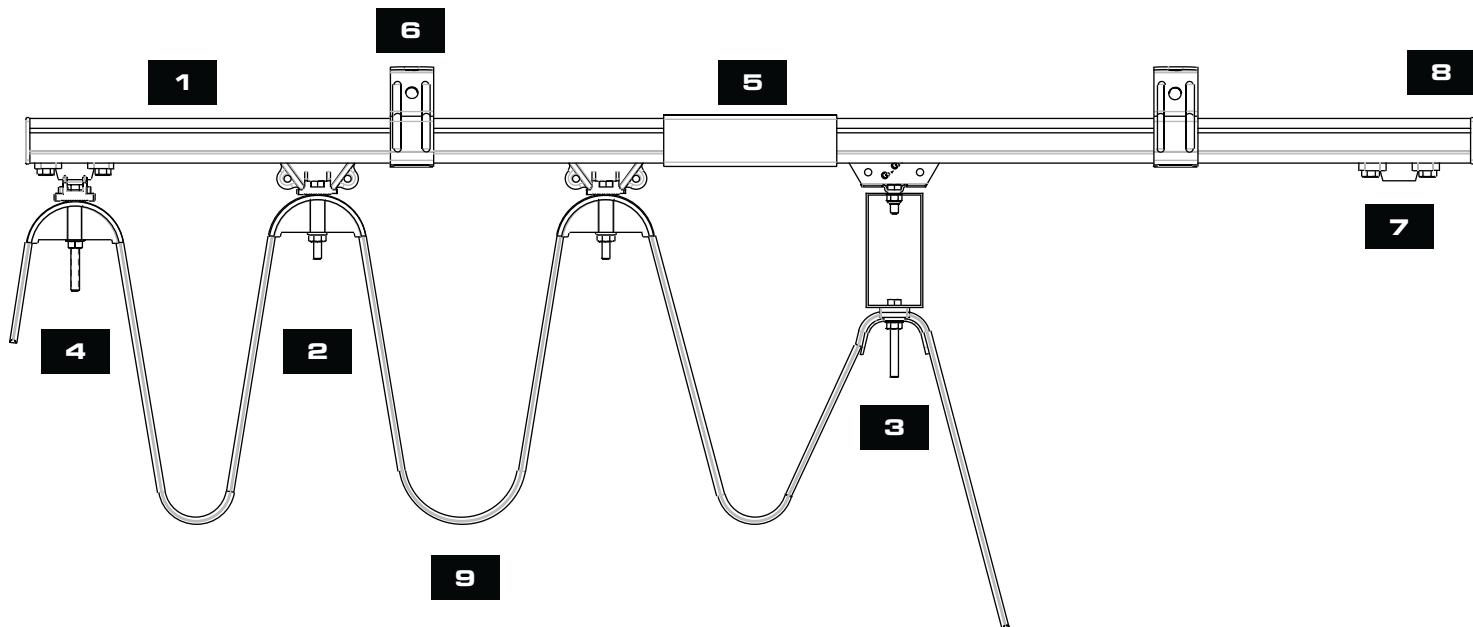

- **TROLLEY LOAD CAPACITY: 8 kg**
- **Rope diameter: 8 mm**
- **Travel speed: 40 m/min**

#### E. LINE I-BEAM Light Series

- **TROLLEY LOAD CAPACITY: 50 kg**
- **I-beam type: IPE-IPN 80÷100**
- **Travel speed: 120 kg/m**
- **Max cable capacity: 70 mm**

**TYPICAL LAYOUT**

<b>1</b>	C-RAIL BAR	Steel material
<b>2</b>	TROLLEY	Supports the cable
<b>3</b>	TOWING TROLLEY	Connects to the mobile device and allows the movement
<b>4</b>	HEAD CLAMP	Cable-supporting element without movement
<b>5</b>	JOINT	Connects two C-rail bars
<b>6</b>	SUPPORT	Holds the C-rail bar
<b>7</b>	END STOP	Prevents the exit of the trolley from the C-rail bar
<b>8</b>	END CAP	Closes and protects the C-rail bar
<b>9</b>	CABLE	Transmits the energy

**FESTOON SYSTEM | LINE CONSTRUCTION**

**LINE DIAGRAMS**

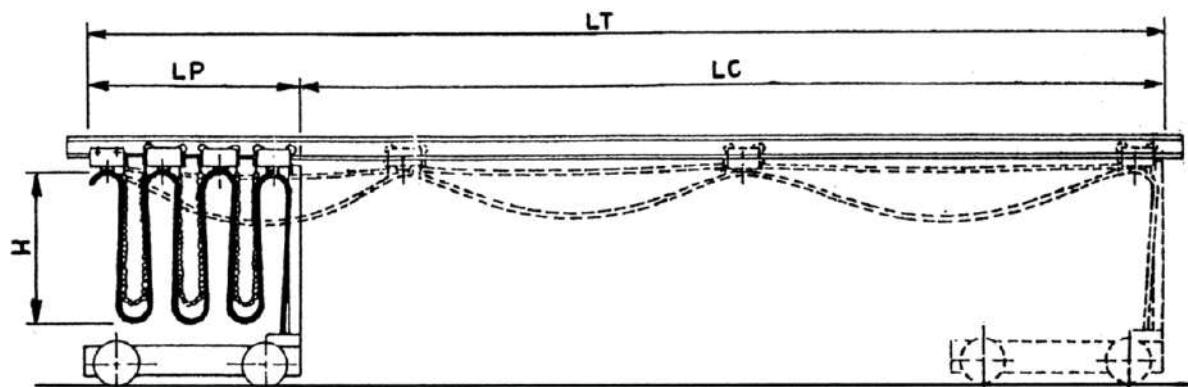

**LINE 30 / 41 /  
41 Stainless Steel**

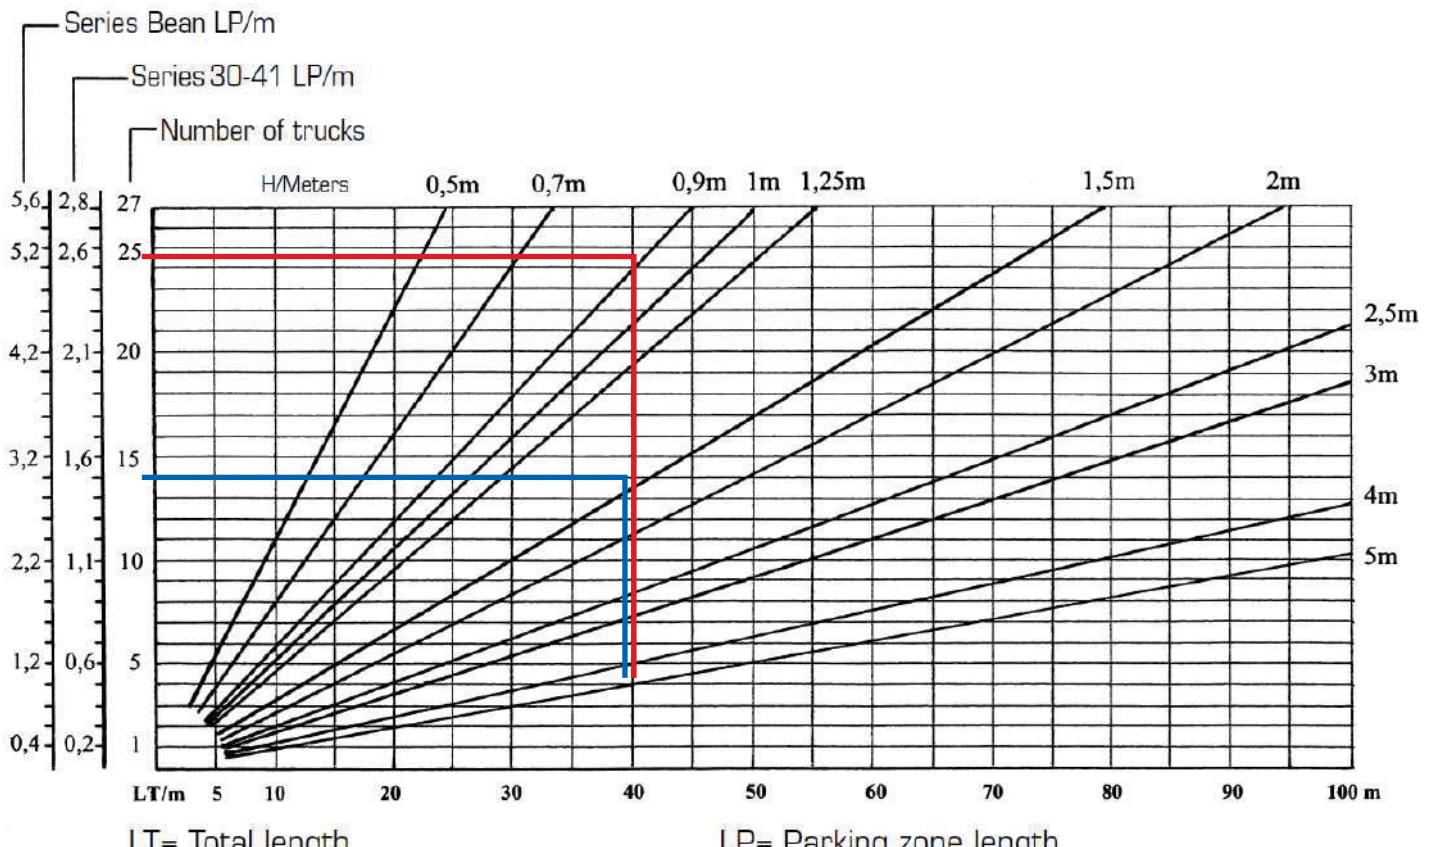

**LINE WIRE-ROPE**

**LINE I-BEAM**

**BLUE Example**

Total line length "LT" = 40 mt  
 Height "H" = 2 mt  
 Number of trolley/trucks = 12 pcs  
 Parking zone length "LP" = 1,2 meters  
 Race length "LC=LT-LP" = 38,8 meters

**RED Example**

Total line length "LT" = 40 meters  
 Height "H" = 1 meters  
 Number of trolley/trucks = 21 pcs  
 Parking zone length "LP" = 2,2 meters  
 Race length "LC=LT-LP" = 37,8 meters

The diagram is used to determine the number of trolley necessary for the formation of the line, depending on its lenght.

The height of the loop determines how many trolley are needed and thus their parking area. Where the parking area is too long at the expense of running real user, it must increase the height of the loops, thus decreasing the number of trolleys required and therefore the parking area. To determine the cable lenght of a garland to increase by 10% the total lenght of the line and add enought to connect the two ends of the fixed and mobile users.

Blue colour sheath.  
Finish the order code  
with "N" for the  
black sheath.

**MAIN FEATURES:**

- Particularly suitable for supply and control circuits, lifting and handling equipment.
- Comply with: CEI 20-22 II (flame resistant).
- Rated operating voltage: 400V.
- Max short circuit temperature: 160°C.
- Insulation class: 2/3.
- Rated insulation voltage: Uo/U 450/750V.
- Operating temperature: -5°C + 70°C.
- Internal conductors with flexible PVC sheath progressively numbered, plus earth conductor (yellow/green).
- On request the cables can be supplied with a tinned red copper shield heat resistant up to 105 °C (minimum requirement is 2000 m).

Blue colour sheath.  
Finalize the code with  
"N" for the black colour.

- Made for heavy duty applications, in particular for pendant push button stations and moving electromechanical components.
- The two strain relief ropes avoid any stress on the cable; they are embedded, diametrically opposed to PVC sheath.
- Comply with: CEI 20-22 II (flame resistant).
- Rated operating voltage: 230V.
- Max short circuit temperature: 160°C.
- Ø2mm steel strain relief ropes.
- Insulation class: 2/3.
- Rated insulation voltage: Uo/U 300/500V.
- Operating temperature: -5°C +70°C.
- Breaking point: 60kg/mm<sup>2</sup>.
- Internal conductors with flexible PVC sheath progressively numbered, plus earth conductor (yellow/green).
